EDUCATION

■ ETH Zürich

M.Sc. Mathematics

Zurich, Switzerland

September 2021 - December 2023

- Degree completed with a thesis on differentiable haemodynamics solver in JAX (Python).

■ ETH Zürich

M.Sc. Computational Science and Engineering, Specialization Physics

Zurich, Switzerland

September 2018 - August 2021

- Degree completed with a thesis on solving the transmission scattering problem using BEM (C++).

■ Universität Basel

B.Sc. Computational Mathematics

Basel, Switzerland

September 2014 - Februar 2018

- Completed extracurricular courses on Computer Architecture, Operating Systems and Quantum Mechanics.

■ Gymnasium Bäumlihof

Matura, Specialization Biology & Chemistry

Basel, Switzerland

August 2009 - July 2014

PROJECTS & THESIS

- Parallelizing the Barnes-Hut Algorithm with MPI: Parallelized implementation of N-Body solver in C++ using the MPI framework. (Course Work)
- AiiDA Lab implementation of IR spectrum calculations for carbon based nanomaterials: An AiiDa workflow implemented in the Jupyter Notebooks based AiiDa lab interface. (Semesters Thesis, Computational Science)
- Near Resonances for Scattering Transmission Problems: A BEM based C++ solver for Scattering Transmission Problems, developed to investigate scatterer-dependent near resonances. (Masters Thesis, Computational Science)
- Detecting Near Resonances in Acoustic Scattering: Continued development of root finding algorithm from the Masters Thesis using empirical evidence and state of the art computation of singular values. (Published Paper)
- ML based game simulation in a finance setting: Agents trained to trade or hold a stock taking into account real historical data on cash returns. Policies are learned via reinforcement learning. (Course Work)

- On differentiable simulations of haemodynamic systems: A 1D-haemodynamics solver written in Python using JAX. The differentiability of the solver aims to aid in the development of personalised medicine. (Masters Thesis, Mathematics)

PUBLICATIONS

- Detecting Near Resonances in Acoustic Scattering: Continued development of root finding algorithm from the Masters Thesis using empirical evidence and state of the art computation of singular values. (Published)
- On differentiable simulations of haemodynamic systems: A 1D-haemodynamics solver written in Python using JAX. The differentiability of the solver aims to aid in the development of personalised medicine. (Work in Progress)
- Raman spectroscopy enabled automatic media release controlled by convolutional neural networks. (Work in Progress)

EXPERIENCE

- Novartis Pharma AG** Basel, Switzerland
June 2024 - December 2024
Intern
 - Developing ML/AI algorithms for classifying Raman spectroscopy data.**Technologies:** imbalanced-learn, JAX, Matplotlib, NumPy, scikit-learn, SciPy, TensorFlow
Theory: (C)NN, DoE, GMM, PCA, SMOTE
- plantime** Basel, Switzerland
January 2024 - Today
Software Engineer
 - Developing ML/AI algorithms for optimizing shift scheduling.**Technologies:** Rust
Theory: Evolutionary optimization algorithms
- ETH Zürich** Zurich, Switzerland
September 2021 - February 2022
Teaching Assistant
 - Teaching Assistant for Lecture "Numerical Methods for Computer Science".**Technologies:** C++
Theory: ODEs, PDEs and numerical algorithms to solve them
- ETH Zürich** Zurich, Switzerland
September 2020 - June 2021
Research Assistant
 - Hired for continued development of BEM code that was implemented in Masters Thesis.**Technologies:** C++, CMake, Git
Theory: BEM, Resonances in Transmission Scattering Problems
- ETH Zürich** Zurich, Switzerland
September 2020 - February 2021
Teaching Assistant
 - Teaching Assistant for Lecture "Numerical Methods".**Technologies:** C++, CMake
Theory: ODEs, PDEs and numerical algorithms to solve them
- CSCS Swiss National Supercomputing Center** Lugano, Switzerland
May 2018 - August 2018
Internship
 - Writing regression checks for Piz Daint, Cray XC40/XC50 production system.**Technologies:** C, MPI, MySQL, Kibana, Grafana

CERTIFICATES & EXTRACURRICULARS

- **Ready, set, go! A short introduction for Student Teaching Assistants** (remote) Zurich
Education Development and Technology, ETH Zurich April 2020
 - Improving didactic skills
 - Setting goals for upcoming teaching activity

- **Effective High-Performance Computing & Data Analytics with GPU** (remote) Lugano, Switzerland
Summerschool, CSCS-USI July 2020
 - GPU: architecture & programming (CUDA, OpenACC)
 - JupyterLab
 - Python: Numpy, SciPy, Dask, Numba
 - ML: Rapids
 - Deep Learning: TensorFlow

- **International Consulting Network (ICON)** Shanghai, (remote) Belo Horizonte
Student Consulting Network March 2017 - Februar 2018
 - Market Research & Trend Analysis consulting for CREP (Real Estate, China) & Lalubema (Private Security, Brazil)

NAMED REFERENCES

- **Dr. Andreas Jocksch**
Senior Research Software Engineer
 - Phone: +41 91 610 82 32
 - Mail: andreas.jocksch@cscs.ch

Relation: Supervisor during internship at CSCS on writing regression checks for Piz Daint, Cray XC40/XC50 production system.

- **Prof. Dr. Ralf Hiptmair**
Full Professor and Deputy head of Dep. of Mathematics / Head of Seminar for Applied Mathematics at ETH Zürich
 - Phone: +41 44 632 34 04
 - Mail: ralf.hiptmair@sam.math.ethz.ch

Relation: Supervisor of Computational Science Masters Thesis on solving the transmission scattering problem using BEM (C++).

- **Prof. Dr. Siddhartha Mishra**
Full Professor at the Dep. of Mathematics / Deputy head of Seminar for Applied Mathematics at ETH Zürich
 - Phone: +41 44 632 75 63
 - Mail: siddhartha.mishra@sam.math.ethz.ch

Relation: Supervisor of Mathematics Masters Thesis on differentiable haemodynamics solver in JAX (Python).

- **Dr. Georgios Kissas**
Post Doctoral Fellow at ETH AI Center + BAUG + MAVT + SAM
 - Phone: +41 78 969 95 77
 - Mail: gkissas@ai.ethz.ch

Relation: Co-Supervisor of Mathematics Masters Thesis on differentiable haemodynamics solver in JAX (Python) and Supervisor of publication thereof.
